

Amendments to the Specification

Kindly replace the paragraph beginning on page 4, line 22, with the following amended paragraph:

As shown in Figure 2, the insertion rinsing tube 1 is also exchangeably and sealably held in a bore 4 in the head portion 8 of the housing 5 by means of a seal 3 located within the head portion 8. In this embodiment, the insertion rinsing tube 1 is angled, preferably by an angle α_2 that is approximately 90° . The water flow direction is inclined from the inlet side 10 to the outlet side 11 of the ~~insertion rinsing tube 1~~ housing 5 by an angle $(\alpha_1 + \alpha_2)$ of more than 90° and less than 180° . Preferably, the angle $(\alpha_1 + \alpha_2)$ between is 120° and 150° . The corresponding supplementary angle β , which is the angle between the outlet side of insertion rinsing tube 1 and the inlet side 10 of the housing 5, equals $[180^\circ - (\alpha_1 + \alpha_2)]$. Angle β is more than 0° but less than 90° , and is preferably between 30° and 60° .
